

1. Application installation

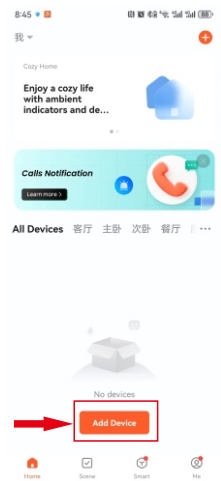

To download this App, search "Tuya" on Apple's App Store and app markets or scan the following QR code.

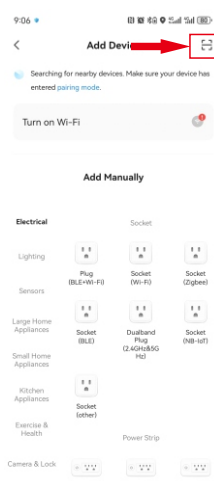

2. Add a device

1.1 Tap + in the upper right corner of the device screen to go to the Add device screen. Before adding a device, ensure that a SIM card is inserted into the controller and that the controller is powered on.

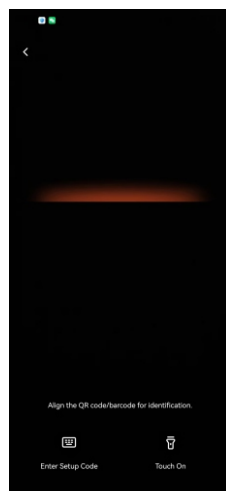

1.2 Click the icon of scanning QR code in the upper right corner of the Add Device interface to enter the interface of scanning QR code (you need to use the phone camera permission) Scan the two-dimensional code on the controller shell for network configuration. After the device is successfully added, you can modify the device name and device scenario.
